

# DonorsChoose

DonorsChoose.org receives hundreds of thousands of project proposals each year for classroom projects in need of funding. Right now, a large number of volunteers is needed to manually screen each submission before it's approved to be posted on the DonorsChoose.org website.

Next year, DonorsChoose.org expects to receive close to 500,000 project proposals. As a result, there are three main problems they need to solve:

- How to scale current manual processes and resources to screen 500,000 projects so that they can be posted as quickly and as efficiently as possible
- How to increase the consistency of project vetting across different volunteers to improve the experience for teachers
- How to focus volunteer time on the applications that need the most assistance

The goal of the competition is to predict whether or not a DonorsChoose.org project proposal submitted by a teacher will be approved, using the text of project descriptions as well as additional metadata about the project, teacher, and school. DonorsChoose.org can then use this information to identify projects most likely to need further review before approval.

## About the DonorsChoose Data Set

The `train.csv` data set provided by DonorsChoose contains the following features:

| Feature                                    | Description   |
|--|---|
| <code>project_id</code>                    | A unique identifier for the proposed project. <b>Example:</b> p036502   |
| <code>project_title</code>                 | Title of the project. <b>Examples:</b><br>Art Will Make You Happy!<br>First Grade Fun   |
| <code>project_grade_category</code>        | Grade level of students for which the project is targeted. One of the following enumerated values:<br>Grades PreK-2<br>Grades 3-5<br>Grades 6-8<br>Grades 9-12  |
| <code>project_subject_categories</code>    | One or more (comma-separated) subject categories for the project from the following enumerated list of values:<br>Applied Learning<br>Care & Hunger<br>Health & Sports<br>History & Civics<br>Literacy & Language<br>Math & Science<br>Music & The Arts<br>Special Needs<br>Warmth<br><br><b>Examples:</b><br>Music & The Arts<br>Literacy & Language, Math & Science |
| <code>school_state</code>                  | State where school is located ( <a href="#">Two-letter U.S. postal code</a> ). <b>Example:</b> WY   |
| <code>project_subject_subcategories</code> | One or more (comma-separated) subject subcategories for the project. <b>Examples:</b><br>Literacy<br>Literature & Writing, Social Sciences  |
| <code>project_resource_summary</code>      | An explanation of the resources needed for the project. <b>Example:</b><br>My students need hands on literacy materials to manage sensory needs!  |
| <code>project_essay_1</code>               | First application essay*  |
| <code>project_essay_2</code>               | Second application essay*   |
| <code>project_essay_3</code>               | Third application essay*  |

| Feature                                      | Description   |
|--|---|
| project_essay_4                              | Fourth application essay  |
| project_submitted_datetime                   | Datetime when project application was submitted. <b>Example:</b> 2016-04-28 12:43:56.245  |
| teacher_id                                   | A unique identifier for the teacher of the proposed project. <b>Example:</b> bdf8baa8fedef6bfeec7ae4ff1c15c56   |
| teacher_prefix                               | Teacher's title. One of the following enumerated values: <ul style="list-style-type: none"> <li>nan</li> <li>Dr.</li> <li>Mr.</li> <li>Mrs.</li> <li>Ms.</li> <li>Teacher.</li> </ul> |
| teacher_number_of_previously_posted_projects | Number of project applications previously submitted by the same teacher. <b>Example:</b> 2  |

\* See the section **Notes on the Essay Data** for more details about these features.

Additionally, the `resources.csv` data set provides more data about the resources required for each project. Each line in this file represents a resource required by a project:

| Feature     | Description   |
|-------------|---|
| id          | A <code>project_id</code> value from the <code>train.csv</code> file. <b>Example:</b> p036502 |
| description | Description of the resource. <b>Example:</b> Tenor Saxophone Reeds, Box of 25                 |
| quantity    | Quantity of the resource required. <b>Example:</b> 3  |
| price       | Price of the resource required. <b>Example:</b> 9.95  |

**Note:** Many projects require multiple resources. The `id` value corresponds to a `project_id` in `train.csv`, so you use it as a key to retrieve all resources needed for a project:

The data set contains the following label (the value you will attempt to predict):

| Label               | Description   |
|---------------------|---|
| project_is_approved | A binary flag indicating whether DonorsChoose approved the project. A value of 0 indicates the project was not approved, and a value of 1 indicates the project was approved. |

## Notes on the Essay Data

Prior to May 17, 2016, the prompts for the essays were as follows:

- \_\_project\_essay\_1\_\_: "Introduce us to your classroom"
- \_\_project\_essay\_2\_\_: "Tell us more about your students"
- \_\_project\_essay\_3\_\_: "Describe how your students will use the materials you're requesting"
- \_\_project\_essay\_4\_\_: "Close by sharing why your project will make a difference"

Starting on May 17, 2016, the number of essays was reduced from 4 to 2, and the prompts for the first 2 essays were changed to the following:

- \_\_project\_essay\_1\_\_: "Describe your students: What makes your students special? Specific details about their background, your neighborhood, and your school are all helpful."
- \_\_project\_essay\_2\_\_: "About your project: How will these materials make a difference in your students' learning and improve their school lives?"

For all projects with `project_submitted_datetime` of 2016-05-17 and later, the values of `project_essay_3` and `project_essay_4` will be NaN.

## 1.1 Reading Data

In [5]:

```

project_data = pd.read_csv('train_data.csv')
resource_data = pd.read_csv('resources.csv')

```

In [6]:

```

print("Number of data points in train data", project_data.shape)
print('-'*50)
print("The attributes of data :", project_data.columns.values)

```

Number of data points in train data (109248, 17)

```

-----
The attributes of data : ['Unnamed: 0' 'id' 'teacher_id' 'teacher_prefix' 'school_state'
'project_submitted_datetime' 'project_grade_category'
'project_subject_categories' 'project_subject_subcategories'
'project_title' 'project_essay_1' 'project_essay_2' 'project_essay_3'
'project_essay_4' 'project_resource_summary'
'teacher_number_of_previously_posted_projects' 'project_is_approved']

```

In [7]:

```

print("Number of data points in train data", resource_data.shape)
print(resource_data.columns.values)
resource_data.head(2)

```

Number of data points in train data (1541272, 4)  
['id' 'description' 'quantity' 'price']

Out[7]:

|   | id      | description                                       | quantity | price  |
|---|---------|---|----------|--------|
| 0 | p233245 | LC652 - Lakeshore Double-Space Mobile Drying Rack | 1        | 149.00 |
| 1 | p069063 | Bouncy Bands for Desks (Blue support pipes)       | 3        | 14.95  |

## 1.2 Data Analysis

In [8]:

```
# PROVIDE CITATIONS TO YOUR CODE IF YOU TAKE IT FROM ANOTHER WEBSITE.
# https://matplotlib.org/gallery/pie_and_polar_charts/pie_and_donut_labels.html#sphx-glr-gallery-pie-and-polar-charts-pie-and-donut-labels-py

y_value_counts = project_data['project_is_approved'].value_counts()
print("Number of projects that are approved for funding ", y_value_counts[1], ", (",
      (y_value_counts[1]/(y_value_counts[1]+y_value_counts[0]))*100,"%")
print("Number of projects that are not approved for funding ", y_value_counts[0], ", (",
      (y_value_counts[0]/(y_value_counts[1]+y_value_counts[0]))*100,"%")

## 1.2.3 Univariate Analysis: project\_grade\_category

In [15]:

```
univariate_barplots(project_data, 'project_grade_category', 'project_is_approved', top=False)
```

|   | project_grade_category | project_is_approved | total | Avg      |
|---|------------------------|---------------------|-------|----------|
| 3 | Grades PreK-2          | 37536               | 44225 | 0.848751 |
| 0 | Grades 3-5             | 31729               | 37137 | 0.854377 |
| 1 | Grades 6-8             | 14258               | 16923 | 0.842522 |
| 2 | Grades 9-12            | 9183                | 10963 | 0.837636 |

=====

|   | project_grade_category | project_is_approved | total | Avg      |
|---|------------------------|---------------------|-------|----------|
| 3 | Grades PreK-2          | 37536               | 44225 | 0.848751 |
| 0 | Grades 3-5             | 31729               | 37137 | 0.854377 |
| 1 | Grades 6-8             | 14258               | 16923 | 0.842522 |
| 2 | Grades 9-12            | 9183                | 10963 | 0.837636 |

## Observation:

1. Every Project grade category has more than 83% approval rate

### 1.2.4 Univariate Analysis: project\_subject\_categories

In [16]:

```
categories = list(project_data['project_subject_categories'].values)
# remove special characters from list of strings python:
https://stackoverflow.com/a/47301924/4084039

# https://www.geeksforgeeks.org/removing-stop-words-nltk-python/
# https://stackoverflow.com/questions/23669024/how-to-strip-a-specific-word-from-a-string
# https://stackoverflow.com/questions/8270092/remove-all-whitespace-in-a-string-in-python
cat_list = []
for i in categories:
    temp = ""
    # consider we have text like this "Math & Science, Warmth, Care & Hunger"
    for j in i.split(','): # it will split it in three parts ["Math & Science", "Warmth", "Care & Hunger"]
        if 'The' in j.split(): # this will split each of the category based on space "Math & Science" => "Math", "&", "Science"
            j = j.replace('The', '') # if we have the words "The" we are going to replace it with '' (i.e. removing 'The')
            j = j.replace(' ', '') # we are replacing all the ' ' (space) with '' (empty) ex: "Math & Science" => "Math&Science"
            temp += j.strip() + " " # "abc ".strip() will return "abc", remove the trailing spaces

| Literacy             | : | 33700 |

## Observation:

1. Literacy is highly used sub category for Approved projects

### 1.2.6 Univariate Analysis: Text features (Title)

In [28]:

```
#How to calculate number of words in a string in DataFrame:
https://stackoverflow.com/a/37483537/4084039
word_count = project_data['project_title'].str.split().apply(len).value_counts()
word_dict = dict(word_count)
word_dict = dict(sorted(word_dict.items(), key=lambda kv: kv[1]))

ind = np.arange(len(word_dict))
plt.figure(figsize=(20,5))
p1 = plt.bar(ind, list(word_dict.values()))

plt.ylabel('Numeber of projects')
plt.xlabel('Numeber words in project title')
plt.title('Words for each title of the project')
plt.xticks(ind, list(word_dict.keys()))
plt.show()
```

## Observation:

1. Large number of projects has 4 words title.
2. Very few projects have title words more than 10 words.

In [29]:

```
approved_title_word_count = project_data[project_data['project_is_approved']==1]['project_title'].  
str.split().apply(len)  
approved_title_word_count = approved_title_word_count.values  
  
rejected_title_word_count = project_data[project_data['project_is_approved']==0]['project_title'].  
str.split().apply(len)  
rejected_title_word_count = rejected_title_word_count.values
```

In [30]:

```
# https://glowingpython.blogspot.com/2012/09/boxplot-with-matplotlib.html  
plt.boxplot([approved_title_word_count, rejected_title_word_count])  
plt.xticks([1,2], ('Approved Projects', 'Rejected Projects'))  
plt.ylabel('Words in project title')  
plt.grid()  
plt.show()
```

In [31]:

```
plt.figure(figsize=(10,3))  
sns.kdeplot(approved_title_word_count, label="Approved Projects", bw=0.6)  
sns.kdeplot(rejected_title_word_count, label="Not Approved Projects", bw=0.6)  
plt.legend()  
plt.show()
```

## Observation:

1. Both for Approved and rejected projects the mean is almost same with reference to Project title.
2. Approval rate is slightly higher for the projects with more words in title. However this feature can't separate Approval and rejected projects well enough.

### 1.2.7 Univariate Analysis: Text features (Project Essay's)

In [32]:

```
# merge two column text dataframe:  
project_data["essay"] = project_data["project_essay_1"].map(str) + \
```

```
project_data["project_essay_2"].map(str) + \
project_data["project_essay_3"].map(str) + \
project_data["project_essay_4"].map(str)
```

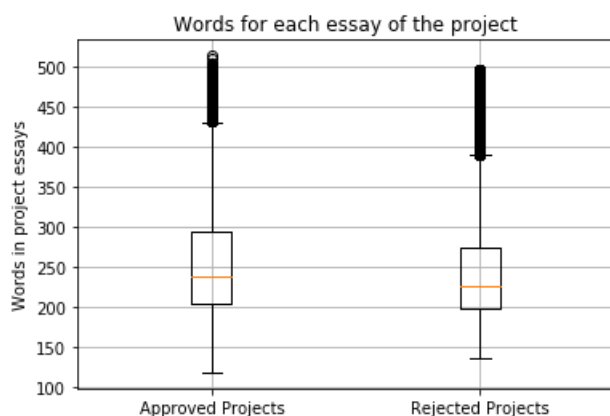

In [33]:

```
approved_word_count = project_data[project_data['project_is_approved']==1]['essay'].str.split().apply(len)
approved_word_count = approved_word_count.values

rejected_word_count = project_data[project_data['project_is_approved']==0]['essay'].str.split().apply(len)
rejected_word_count = rejected_word_count.values
```

In [34]:

```
# https://glowingpython.blogspot.com/2012/09/boxplot-with-matplotlib.html
plt.boxplot([approved_word_count, rejected_word_count])
plt.title('Words for each essay of the project')
plt.xticks([1,2], ('Approved Projects', 'Rejected Projects'))
plt.ylabel('Words in project essays')
plt.grid()
plt.show()
```

In [35]:

```
plt.figure(figsize=(10,3))
sns.distplot(approved_word_count, hist=False, label="Approved Projects")
sns.distplot(rejected_word_count, hist=False, label="Not Approved Projects")
plt.title('Words for each essay of the project')
plt.xlabel('Number of words in each eassay')
plt.legend()
plt.show()
```

## Observation:

1. Both for Approved and rejected projects the mean is almost same.
2. Approval rate is slightly higher for the projects with more words in essays.

## 1.2.8 Univariate Analysis: Cost per project

In [36]:

```
# we get the cost of the project using resource.csv file
resource_data.head(2)
```

Out[36]:

|   | id      | description                                       | quantity | price  |

## Observation:

1. Price of approved projects is cheaper compare to rejected projects

### 1.2.9 Univariate Analysis: teacher\_number\_of\_previously\_posted\_projects

Please do this on your own based on the data analysis that was done in the above cells

In [43]:

```
univariate_barplots(project_data, 'teacher_number_of_previously_posted_projects',  
'project_is_approved', top=False)
```

|   | teacher_number_of_previously_posted_projects | project_is_approved | total | \ |
|---|--|---------------------|-------|---|
| 0 | 0  | 24652               | 30014 |   |
| 1 | 1  | 13329               | 16058 |   |

| 1 | 0.830054 |
| 2 | 0.841063 |
| 3 | 0.843460 |
| 4 | 0.845423 |

```
=====
```

|     | teacher_number_of_previously_posted_projects | project_is_approved | total | \ |
|-----|--|---------------------|-------|---|
| 242 | 242  | 1                   | 1     |   |
| 268 | 270  | 1                   | 1     |   |
| 234 | 234  | 1                   | 1     |   |
| 335 | 347  | 1                   | 1     |   |
| 373 | 451  | 1                   | 1     |   |

|     | Avg |
|-----|-----|
| 242 | 1.0 |
| 268 | 1.0 |
| 234 | 1.0 |
| 335 | 1.0 |
| 373 | 1.0 |

## Observation :

1. Project Approval rate ~ 100% for the Teachers who has greater number of previously posted projects.
2. However large number of teachers haven't projects previously

## Conclusion for EDA:

1. Very good data points are collected for each feature.
2. However following analysis can't help in efficiently separating Project Approval and Rejection.
3. Teachers previously posted projects, Project title, Project category and sub category are some useful categorial features for classification.
4. Text data analysis might help in further classification

### 1.2.10 Univariate Analysis: project\_resource\_summary

Please do this on your own based on the data analysis that was done in the above cells

Check if the presence of the numerical digits in the project\_resource\_summary effects the acceptance of the project or not. If you observe that presence of the numerical digits is helpful in the classification, please include it for further process or you can ignore it.

## 1.3 Text preprocessing

My students are English learners that are working on English as their second or third languages. We are a melting pot of refugees, immigrants, and native-born Americans bringing the gift of language to our school. \r\n\r\n We have over 24 languages represented in our English Learner program with students at every level of mastery. We also have over 40 countries represented with the families within our school. Each student brings a wealth of knowledge and experiences to us that open our eyes to new cultures, beliefs, and respect.\"The limits of your language are the limits of your world.\"-Ludwig Wittgenstein Our English learner's have a strong support system at home that at begs for more resources. Many times our parents are learning to read and speak English along side of their children. Sometimes this creates barriers for parents to be able to help their child learn phonetics, letter recognition, and other reading skills.\r\n\r\nBy providing these dvd's and players, students are able to continue their mastery of the English language even if no one at home is able to assist. All families with students within the Level 1 proficiency status, will be offered to be a part of this program. These educational videos will be specially chosen by the English Learner Teacher and will be sent home regularly to watch. The videos are to help the child develop early reading skills.\r\n\r\nParents that do not have access to a dvd player will have the opportunity to check out a dvd player to use for the year. The plan is to use these videos and educational dvd's for the years to come for other EL students.\r\nnnannan

=====

The 51 fifth grade students that will cycle through my classroom this year all love learning, at least most of the time. At our school, 97.3% of the students receive free or reduced price lunch. Of the 560 students, 97.3% are minority students. \r\nThe school has a vibrant community that loves to get together and celebrate. Around Halloween there is a whole school parade to show off the beautiful costumes that students wear. On Cinco de Mayo we put on a big festival with crafts made by the students, dances, and games. At the end of the year the school hosts a carnival to celebrate the hard work put in during the school year, with a dunk tank being the most popular activity. My students will use these five brightly colored Hokki stools in place of regular, stationary, 4-legged

chairs. As I will only have a total of ten in the classroom and not enough for each student to have an individual one, they will be used in a variety of ways. During independent reading time they will be used as special chairs students will each use on occasion. I will utilize them in place of chairs at my small group tables during math and reading times. The rest of the day they will be used by the students who need the highest amount of movement in their life in order to stay focused on school.

Whenever asked what the classroom is missing, my students always say more Hokki Stools. They can't get their fill of the 5 stools we already have. When the students are sitting in group with me on the Hokki Stools, they are always moving, but at the same time doing their work. Anytime the students get to pick where they can sit, the Hokki Stools are the first to be taken. There are always students who head over to the kidney table to get one of the stools who are disappointed as there are not enough of them.

We ask a lot of students to sit for 7 hours a day. The Hokki stools will be a compromise that allow my students to do desk work and move at the same time. These stools will help students to meet their 60 minutes a day of movement by allowing them to activate their core muscles for balance while they sit. For many of my students, these chairs will take away the barrier that exists in schools for a child who can't sit still.

nannan

How do you remember your days of school? Was it in a sterile environment with plain walls, rows of desks, and a teacher in front of the room? A typical day in our room is nothing like that. I work hard to create a warm inviting themed room for my students look forward to coming to each day.

My class is made up of 28 wonderfully unique boys and girls of mixed races in Arkansas. They attend a Title I school, which means there is a high enough percentage of free and reduced-price lunch to qualify. Our school is an "open classroom" concept, which is very unique as there are no walls separating the classrooms. These 9 and 10 year-old students are very eager learners; they are like sponges, absorbing all the information and experiences and keep on wanting more. With these resources such as the comfy red throw pillows and the whimsical nautical hanging decor and the blue fish nets, I will be able to help create the mood in our classroom setting to be one of a themed nautical environment. Creating a classroom environment is very important in the success in each and every child's education. The nautical photo props will be used with each child as they step foot into our classroom for the first time on Meet the Teacher evening. I'll take pictures of each child with them, have them developed, and then hung in our classroom ready for their first day of 4th grade. This kind gesture will set the tone before even the first day of school! The nautical thank you cards will be used throughout the year by the students as they create thank you cards to their team groups.

Your generous donations will help me to help make our classroom a fun, inviting, learning environment from day one.

It costs a lot of money out of my own pocket on resources to get our classroom ready. Please consider helping with this project to make our new school year a very successful one. Thank you!

nannan

My kindergarten students have varied disabilities ranging from speech and language delays, cognitive delays, gross/fine motor delays, to autism. They are eager beavers and always strive to work their hardest working past their limitations.

The materials we have are the ones I seek out for my students. I teach in a Title I school where most of the students receive free or reduced price lunch. Despite their disabilities and limitations, my students love coming to school and come eager to learn and explore. Have you ever felt like you had ants in your pants and you needed to groove and move as you were in a meeting? This is how my kids feel all the time. The want to be able to move as they learn or so they say. Wobble chairs are the answer and I love them because they develop their core, which enhances gross motor and in turn fine motor skills.

They also want to learn through games, my kids don't want to sit and do worksheets. They want to learn to count by jumping and playing. Physical engagement is the key to our success. The number toss and color and shape mats can make that happen. My students will forget they are doing work and just have the fun a 6 year old deserves.

nannan

The mediocre teacher tells. The good teacher explains. The superior teacher demonstrates. The great teacher inspires. -William A. Ward

My school has 803 students which is makeup is 97.6% African-American, making up the largest segment of the student body. A typical school in Dallas is made up of 23.2% African-American students. Most of the students are on free or reduced lunch. We aren't receiving doctors, lawyers, or engineers children from rich backgrounds or neighborhoods. As an educator I am inspiring minds of young children and we focus not only on academics but one smart, effective, efficient, and disciplined students with good character. In our classroom we can utilize the Bluetooth for swift transitions during class. I use a speaker which doesn't amplify the sound enough to receive the message. Due to the volume of my speaker my students can't hear videos or books clearly and it isn't making the lessons as meaningful. But with the bluetooth speaker my students will be able to hear and I can stop, pause and replay it at any time.

The cart will allow me to have more room for storage of things that are needed for the day and has an extra part to it I can use. The table top chart has all of the letter, words and pictures for students to learn about different letters and it is more accessible.

# with the same hstack function we are concatenating a sparse matrix and a dense matrix :)
X_all = hstack((sample_categories_one_hot, sample_sub_categories_one_hot,
sample_categories_one_hot_grade,
sample_categories_one_hot_state, sampleTitle_8000, sample_price_standardized))
X_all.shape
```

Out[187]:

```
(8000, 654)
```

## Assignment 2: Apply TSNE

If you are using any code snippet from the internet, you have to provide the reference/citations, as we did in the above cells. Otherwise, it will be treated as plagiarism without citations.

1. In the above cells we have plotted and analyzed many features. Please observe the plots and write the observations in markdown cells below every plot.
2. EDA: Please complete the analysis of the feature: teacher\_number\_of\_previously\_posted\_projects
3. Build the data matrix using these features
  - school\_state : categorical data (one hot encoding)
  - clean\_categories : categorical data (one hot encoding)
  - clean\_subcategories : categorical data (one hot encoding)
  - teacher\_prefix : categorical data (one hot encoding)
  - project\_grade\_category : categorical data (one hot encoding)
  - project\_title : text data (BOW, TFIDF, AVG W2V, TFIDF W2V)
  - price : numerical
  - teacher\_number\_of\_previously\_posted\_projects : numerical
4. Now, plot FOUR t-SNE plots with each of these feature sets.
  - Δ categorical numerical features + project title(BOW)

- A. categorical, numerical features + project\_title(BOW)
  - B. categorical, numerical features + project\_title(TFIDF)
  - C. categorical, numerical features + project\_title(AVG W2V)
  - D. categorical, numerical features + project\_title(TFIDF W2V)
5. Concatenate all the features and Apply TNSE on the final data matrix
  6. **Note 1: The TSNE accepts only dense matrices**
  7. **Note 2: Consider only 5k to 6k data points to avoid memory issues. If you run into memory error issues, reduce the number of data points but clearly state the number of data-points you are using**

In [1]:

```
# this is the example code for TSNE
import numpy as np
from sklearn.manifold import TSNE
from sklearn import datasets
import pandas as pd
import matplotlib.pyplot as plt

iris = datasets.load_iris()
x = iris['data']
y = iris['target']

tsne = TSNE(n_components=2, perplexity=30, learning_rate=200)

X_embedding = tsne.fit_transform(x)
# if x is a sparse matrix you need to pass it as X_embedding = tsne.fit_transform(x.toarray()) , .
# toarray() will convert the sparse matrix into dense matrix

for_tsne = np.hstack((X_embedding, y.reshape(-1,1)))
for_tsne_df = pd.DataFrame(data=for_tsne, columns=['Dimension_x', 'Dimension_y', 'Score'])
colors = {0:'red', 1:'blue', 2:'green'}
plt.scatter(for_tsne_df['Dimension_x'], for_tsne_df['Dimension_y'], c=for_tsne_df['Score'].apply(lambda x: colors[x]))
plt.show()
```

## 2.1 TSNE with `BOW` encoding of `project\_title` feature

In [128]:

```
# please write all of the code with proper documentation and proper titles for each subsection
# when you plot any graph make sure you use
# a. Title, that describes your plot, this will be very helpful to the reader
# b. Legends if needed
# c. X-axis label
# d. Y-axis label
# Have referred some of the Kernels from https://www.kaggle.com/snap/amazon-fine-food-reviews

from sklearn.manifold import TSNE
from sklearn import datasets
import pandas as pd
import matplotlib.pyplot as plt
```

```
# storing 8k data points in approve lists
approve = final_approvals['project_is_approved']

# 8k Sample Datapoints are taken into consideration
# Shape of Sample BOW project title is (8000, 558)
# Iteration for 8000 Datapoints with a perplexity of 50
model = TSNE(n_components=2, perplexity=150, n_iter = 2000, random_state=0)

# if x is a sparse matrix you need to pass it as X_embedding = tsne.fit_transform(x.todense()) , .
toarray() will convert the sparse matrix into dense matrix

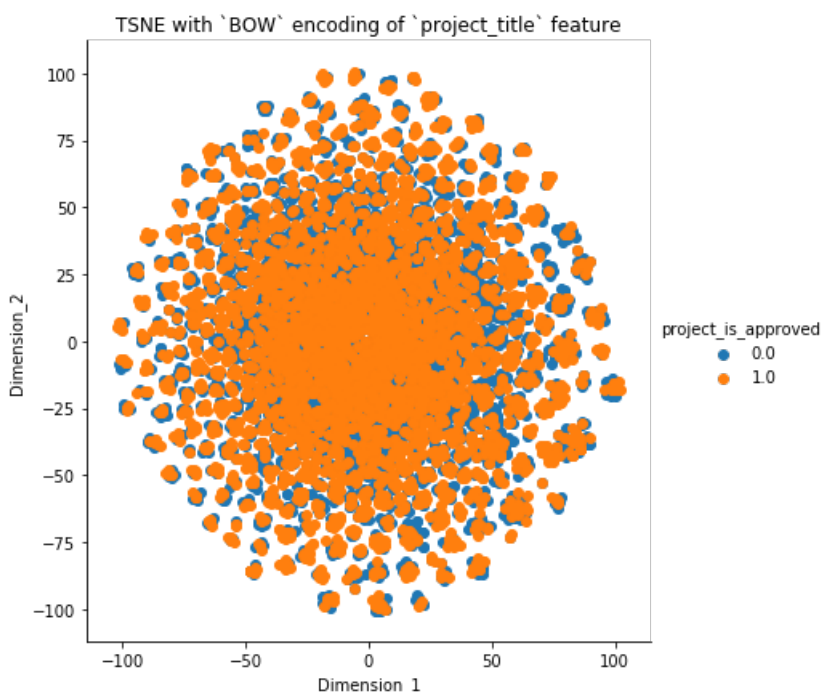

for_tsne = model.fit_transform(sampleTitle_8000)
for_tsne = np.vstack((for_tsne.T, approve)).T

# X- axis is Dimension_1 and Y-axis is Dimension_2

for_tsne_df = pd.DataFrame(data=for_tsne,
columns=['Dimension_1', 'Dimension_2', 'project_is_approved'])
sns.FacetGrid(for_tsne_df, hue="project_is_approved", size=6).map(plt.scatter, 'Dimension_1', 'Dimension_2').add_legend()
plt.title("TSNE with `BOW` encoding of `project_title` feature")
plt.show()
```

C:\Users\psudheer\AppData\Local\Continuum\anaconda3\lib\site-packages\seaborn\axisgrid.py:230: Use rWarning:

The `size` paramter has been renamed to `height`; please update your code.

## Observation:

1. Points are not very well separated for Project approved or rejected.
2. Lot of overlapping is seen for projects approved vs rejected

## 2.2 TSNE with `TFIDF` encoding of `project\_title` feature

In [131]:

```
# please write all the code with proper documentation, and proper titles for each subsection
# when you plot any graph make sure you use
# a. Title, that describes your plot, this will be very helpful to the reader
# b. Legends if needed
# c. X-axis label
# d. Y-axis label
```

```
# Have referred some of the Kernels from https://www.kaggle.com/snap/amazon-fine-food-reviews

from sklearn.manifold import TSNE
from sklearn import datasets
import pandas as pd
import matplotlib.pyplot as plt

approve = final_approvals['project_is_approved']

# 8k Sample Datapoints are taken into consideration
# Shape of Sample BOW project title is (8000, 558)
# Iteration for 8000 Datapoints with a perplexity of 50
model = TSNE(n_components=2, perplexity=50, n_iter = 2000, random_state=0)

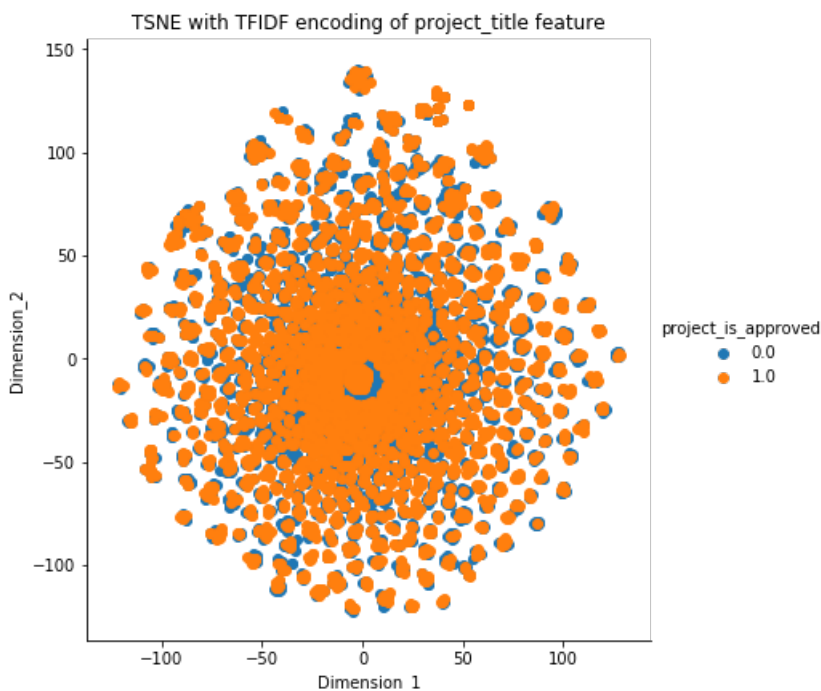

# if x is a sparse matrix you need to pass it as X_embedding = tsne.fit_transform(x.todense()) , .
# toarray() will convert the sparse matrix into dense matrix

for_tsne_tfidf = model.fit_transform(sample_tfidf_title)
for_tsne_tfidf = np.vstack((for_tsne_tfidf.T, approve)).T

for_tsne_tfidf_df = pd.DataFrame(data=for_tsne_tfidf,
                                columns=['Dimension_1', 'Dimension_2', 'project_is_approved'])
sns.FacetGrid(for_tsne_tfidf_df, hue="project_is_approved", size=6).map(plt.scatter, 'Dimension_1',
'Dimension_2').add_legend()
plt.title("TSNE with TFIDF encoding of project_title feature")
plt.show()
```

C:\Users\psudheer\AppData\Local\Continuum\anaconda3\lib\site-packages\seaborn\axisgrid.py:230: Use rWarning:

The `size` paramter has been renamed to `height`; please update your code.

## Observation:

1. Points are not very well separated for Project approved or rejected.
2. Lot of overlapping is seen for projects approved vs rejected

## 2.3 TSNE with `AVG W2V` encoding of `project\_title` feature

In [132]:

```
# please write all the code with proper documentation, and proper titles for each subsection
# when you plot any graph make sure you use
# a. Title, that describes your plot, this will be very helpful to the reader
# b. Legends if needed
# c. X-axis label
# d. Y-axis label

# Have referred some of the Kernels from https://www.kaggle.com/snap/amazon-fine-food-reviews

from sklearn.manifold import TSNE
from sklearn import datasets
import pandas as pd
import matplotlib.pyplot as plt

approve = final_approvals['project_is_approved']

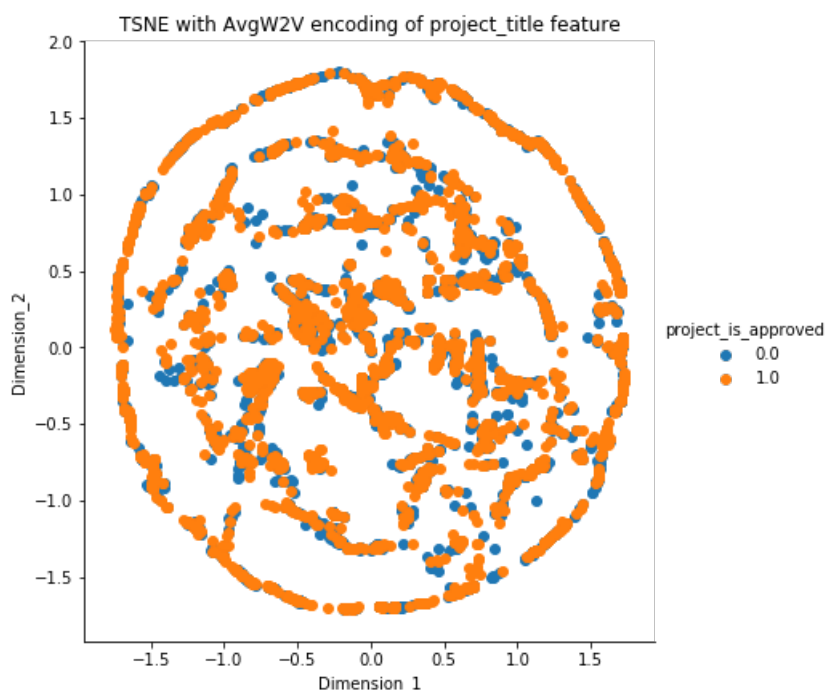

# 8k Sample Datapoints are taken into consideration
# Shape of Sample BOW project title is (8000, 300)
# Iteration for 8000 Datapoints with a perplexity of 50
model = TSNE(n_components=2, perplexity=50, n_iter = 2000, random_state=0)

for_tsne_avgW2V = model.fit_transform(sample_avg_w2v_vectors_title)
for_tsne_avgW2V = np.vstack((for_tsne_avgW2V.T, approve)).T

for_tsne_avgW2V_df = pd.DataFrame(data=for_tsne_avgW2V,
columns=['Dimension_1', 'Dimension_2', 'project_is_approved'])
sns.FacetGrid(for_tsne_avgW2V_df, hue="project_is_approved", size=6).map(plt.scatter, 'Dimension_1',
'Dimension_2').add_legend()
plt.title("TSNE with AvgW2V encoding of project_title feature")
plt.show()
```

C:\Users\psudheer\AppData\Local\Continuum\anaconda3\lib\site-packages\seaborn\axisgrid.py:230: Use rWarning:

The `size` paramter has been renamed to `height`; please update your code.

## Observation:

1. Points are not very well separated for Project approved or rejected.
2. Lot of overlapping is seen for projects approved vs rejected

## 2.4 tSNE with TFIDF Weighted W2V encoding of project\_title feature

In [150]:

```
# please write all the code with proper documentation, and proper titles for each subsection
# when you plot any graph make sure you use
# a. Title, that describes your plot, this will be very helpful to the reader
# b. Legends if needed
# c. X-axis label
# d. Y-axis label
# Have referred some of the Kernels from https://www.kaggle.com/snap/amazon-fine-food-reviews

from sklearn.manifold import TSNE
from sklearn import datasets
import pandas as pd
import matplotlib.pyplot as plt

approve = final_approvals['project_is_approved']

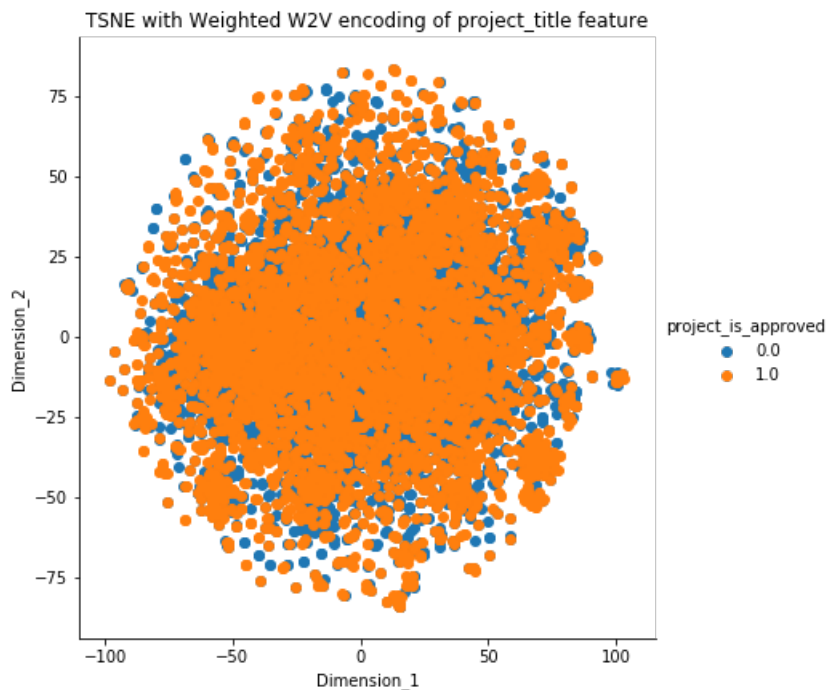

# 8k Sample Datapoints are taken into consideration
# Shape of Sample BOW project title is (8000, 300)
# Iteration for 8000 Datapoints with a perplexity of 50
model = TSNE(n_components=2, perplexity=50, n_iter = 2000, random_state=0)

for_tsne_tfidfW2V = model.fit_transform(sample_tfidf_w2v_vectors_title)
for_tsne_tfidfW2V = np.vstack((for_tsne_tfidfW2V.T, approve)).T

for_tsne_tfidfW2V_df = pd.DataFrame(data=for_tsne_tfidfW2V, columns=['Dimension_1', 'Dimension_2', 'project_is_approved'])
sns.FacetGrid(for_tsne_tfidfW2V_df, hue="project_is_approved", size=6).map(plt.scatter, 'Dimension_1', 'Dimension_2').add_legend()
plt.title("TSNE with Weighted W2V encoding of project_title feature")
plt.show()
```

C:\Users\psudheer\AppData\Local\Continuum\anaconda3\lib\site-packages\seaborn\axisgrid.py:230: UserWarning:

The `size` paramter has been renamed to `height`; please update your code.

### Observation:

1. Points are not very well separated for Project approved or rejected.
2. Lot of overlapping is seen for projects approved vs rejected

In [191]:

```
# Have referred some of the Kernels from https://www.kaggle.com/snap/amazon-fine-food-reviews

from sklearn.manifold import TSNE
from sklearn import datasets
import pandas as pd
import matplotlib.pyplot as plt

approve = final_approvals['project_is_approved']

# 8k Sample Datapoints are taken into consideration
# Shape of Sample BOW project title is (8000, 654)
# Iteration for 8000 Datapoints with a perplexity of 50
model = TSNE(n_components=2, perplexity=50, n_iter = 2000, random_state=0)

# X_all is a horizontal vertical stacking of all the features
for_all = model.fit_transform(X_all.toarray())
for_all = np.vstack((for_all.T, approve)).T

for_all_df = pd.DataFrame(data=for_all, columns=['Dimension_1', 'Dimension_2', 'project_is_approved'
])
sns.FacetGrid(for_all_df, hue="project_is_approved", size=6).map(plt.scatter, 'Dimension_1', 'Dimension_2').add_legend()
plt.title("TSNE with all features")
plt.show()
```

C:\Users\psudheer\AppData\Local\Continuum\anaconda3\lib\site-packages\seaborn\axisgrid.py:230: UserWarning:

The `size` paramter has been renamed to `height`; please update your code.

## Observation:

1. Even on merging all categorical, Text and Numerical data the points are still not very well separated for Project approved or rejected.
2. Lot of overlapping is seen for projects approved vs rejected

## 2.5 Summary

## Conclusion

## CONCLUSION

1. None of the TSNE representation gave us a well separation between projects Approved vs Rejected.
2. We cannot draw a plane or write a condition to separate projects Approved vs Rejected using this analysis.
3. We have to follow some other alternative method for a well separation between projects Approved vs Rejected. .
